i Available storage is less due to phone software. Approximately 8.9 GB storage available for user content. Available storage is subject to change based on phone software updates and apps usage.

ii Network bands in regions may be different, depending on the mobile operator and your location. 4G LTE only available in select countries. Upload and download speeds also depend on the mobile operator.

iii In compliance with IPX7 standards, water resistant up to 1 meter for up to 30 minutes. Do not use the product under water. Please find more information in the User Guide.

iv Battery times (talk time, standby time, and more) are subject to network and phone usage.

v A Standby time specification ("specification") is an industry standard that is only intended to allow comparison of different mobile devices under the same circumstances. Power consumption in a standby state is strongly dependent on factors including but not limited to network, settings, location, movement, signal strength and cell traffic. Comparisons of different mobile devices using such a specification can therefore only be done in a controlled laboratory environment. When using any mobile device in real life circumstances for which the mobile device is intended, the standby time could be considerably lower and will be strongly dependent on the factors as mentioned above.

Note: Specifications are subject to change without prior notice.
